AISentinela Controlled PDF Test Fixture

A synthetic, uniquely identifiable document for an authorized detection test

Purpose

This document is a test fixture created for AISentinela. It contains distinctive text and a stable fixture identifier so that a public copy can be recognized during a bounded scan. It is not a real customer work and contains no personal or confidential information.

Fixture identifier	AS-PDF-FIXTURE-20261028-V1-7KQ9
Test phrase	violet-orbit-cedar-7429
Revision	1
Created for	AISentinela controlled PDF route testing

Distinctive content

The protected source includes the exact sentence: **The violet orbit passes the cedar marker at 7429.** This sentence is deliberately uncommon and should be treated as a content anchor, not as proof of infringement by itself.

Search reference: AS-PDF-FIXTURE-20261028-V1-7KQ9 violet-orbit-cedar-7429

Test instructions

1. Publish this PDF at a public HTTPS URL that you control.

2. Add the URL as a protected work with a descriptive name, for example: AISentinela PDF Fixture V1.

3. Complete the rights declaration and start one bounded scan when the provider governor admits it.

4. Record the scan reference, terminal state, provider calls, candidate URLs, content-verification outcome, evidence, latency and native provider receipt.

5. A matching copy must be reviewed as a candidate; it must not be treated as an infringement automatically.

Expected interpretation

A useful result is a candidate whose fetched content contains the distinctive fixture phrase and whose evidence is linked to this protected work. A title-only or topic-only match is not a verified copy. If the governor blocks the scan, record BLOCKED and do not call that a detection failure.
